

# Pre-Installation

- Before we start:
  - If you have an existing version of Anaconda
    - You have to uninstall it
    - To do it from windows – just clear laptop from python
- Uninstall Anaconda
  - MacOS
    - <https://nektony.com/how-to/uninstall-anaconda-on-a-mac>
  - Windows
    - Follow instructions on clearing python
- Clear your laptop from any python
  - Windows:
    - Control Panel -> Programs and Features -> Python XX.XX
    - Right-hand click and select 'uninstall'
  - MacOS
    - <https://osxuninstaller.com/uninstall-guides/properly-uninstall-python-mac/>

# Anaconda - download

- <https://www.anaconda.com/download/>
- Download the one for your OS – windows or MacOS
- Down python 3.7

# Anaconda - installation

- <http://docs.anaconda.com/anaconda/install/windows/>

**Install Microsoft Visual Studio Code**

- IF you are using MacOS
  - Select MacOS on the left frame

<https://www.datacamp.com/community/tutorials/installing-anaconda-mac-os-x>

- For windows, try to install in on C:\anaconda3
  - You need administrative rights
