Re: Full Time MS Computer Science Faculty

Dear Department Chairperson:

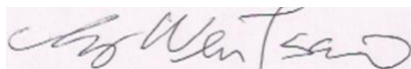

I am very excited for an possible opportunity as a Full Time MS Computer Science Faculty in your department.

I have been a software developer in the Electronic Design Automation (EDA) industry for nearly two decades. I realized that it is a great career transition from software developer to education and it is very rewarding to both me and my prospective students to share my knowledge of computer science and experience of software development.

I am strongly passionate about education with latest technologies. I received a Ph.D. in Computer Science from UCLA and have 18 years programming experience in hi-tech companies. I have in-depth knowledge of algorithms, data structures and analysis, and programming skills for complex large-scale projects. My wife and I home schooled our three children in faith as Christians. With much interests I also tutored college students in the past years. Currently I am teaching in several colleges as an adjunct professor on various computer science subjects, including the advanced computer programming languages, Unix System, computer literacy, computer organization and architectures, web sites and web page design, advanced data structures and algorithms.

Having my industry and teaching experience combined with my education background, I am confident to say that I will bring very valuable contribution to your department. I deeply appreciate that you consider my application for the teaching position in a Christ-centered University.

Sincerely,

Chung-Wen Albert Tsao
