

Collaboration Policy

Operating Systems

Collaboration policy – Programming Assignments

- You must write all the code you hand in for the programming assignments, except for code that we give you as part of the assignment.
- You are not allowed to look at anyone else's solution (and you're not allowed to look at solutions from previous years).
- You may discuss the assignments with other students, but you may not look at or use each other's code.

Please do not publish your code or make it available to current or future students. `github.com` repositories are public by default, so please don't put your code there unless you make the repository private.

StackExchange is a place where developers ask questions and provide answers. That is permissible, but do not post your whole programming assignment there

Collaboration policy – Written Assignments

- You must write the paper yourself
- You are not allowed to look at anyone else's paper (and you're not allowed to look at solutions from previous years).
- You may discuss the assignments with other students, but you may not look at or use each other's paper

Please do not publish your paper or make it available to current or future students. `github.com` repositories are public by default, so please don't put your paper there unless you make the repository private.

StackExchange is a place where developers ask questions and provide answers. That is permissible, but do not post your whole paper assignment there

Late Policy

- Moodle determines whether you are late or not
- In order to help you cope with unexpected emergencies, you can hand in your assignments late, but the total amount of lateness summed over all the deadlines must not exceed 72 hours.
- If you don't hand in an assignment by the last day of classes, we'll give the assignment an F.
- If you hand an assignment in late, and your total late time (including the late time for that assignment) exceeds 72 hours, and you hand it in by the last day of classes, then we'll give it a D or an F depending on whether it seems to basically work.
- You can divide up your 72 hours among the assignments however you like; you don't have to ask or tell us.
- If you want an exception to these rules, please contact me and come with a really good and genuine excuse note.

Dangers of Copying

- FIRST, you do not learn.
- SECOND, we don't trust you anymore
- Both parties are penalized
 - Meaning the copier(s) and the source will be penalized
 - Same goes for programming and written exercises
 - The penalty exercised will be the degree of copying involved.
 - Worst case: F
